Gowanda Announces Expansion of its DYCO Electronics Facility

Gowanda, N.Y. (USA) - [Gowanda Components Group](http://www.gowandacomponentsgroup.com) is pleased to announce the completion of a nearly 50% expansion at its [DYCO Electronics](http://www.dycoelectronics.com) facility in Hornell, New York. The 12,000 sq. ft. expansion will help the company address market demand for its products, enhance work flow and improve operational efficiency.

“We manufacture custom components and assemblies for the rail industry, so size and scale were important drivers for this expansion,” said Greg Georgek, President of DYCO Electronics. “In addition, we’ve seen growth in our overall custom manufacturing business in recent years – with projections for that to continue – as our customers have increased their outsourcing of more assemblies to DYCO,” Georgek added.

DYCO engineers custom solutions for aerospace, military, space, medical and industrial applications, in addition to providing solutions for rail transportation.

“GCG has been strategically focused on having its component and assembly manufacturing be USA-based for decades, long before it recently became popular to do so,” stated the CEO of GCG, Don McElheny. “GCG’s investment in the expansion of DYCO Electronics is yet another example of our commitment to this strategy,” added McElheny.

For more information about GCG or this news release please contact Denis Kohlhagen, VP of Sales for GCG, at sales@gowanda.com or call +1-716-532-2234. For more information about DYCO Electronics please contact Greg Georgek at ggeorgek@dycoelectronics.com or call +1-607-324-2030.

About Gowanda Components Group

Gowanda Components Group (GCG) is a US-based, vertically integrated manufacturer of high performance and tight tolerance electronic components that address the needs of electronic design engineers around the world. Areas of expertise include magnetic devices, specialty filters and custom designs. GCG’s design capabilities and products enhance the performance and reliability of electronic systems in aerospace and defense, communications infrastructure and medical applications. The individual business units that support Gowanda Components Group are Gowanda Electronics, DYCO Electronics, HiSonic, Gowanda REM-tronics, Communication Coil, Butler Winding, RCD Components, TTE Filters, Microwave Circuits and Instec Filters. www.gowandacomponentsgroup.com

About DYCO Electronics

DYCO Electronics designs and manufactures standard and custom magnetic components and electronic assemblies. Products offered include chokes, planars, toroidal components and transformers, including signaling transformers & power frequency transformers. The company also manufactures high voltage power supplies for the static elimination industry. DYCO’s particular expertise is with high reliability and high performance component applications. Markets served include aerospace, commercial, communication, medical, military, oil exploration, space and transportation (rail). Services include coil winding, toroid winding, mechanical assembly, potting and encapsulation and UL listed insulation systems. www.dycoelectronics.com
